

EC Electronics Environmental Policy

The EC Electronics Group is focused on the provision of Electronics Manufacturing Services (EMS) to a wide range of Customers and industries.

The Directors of the Company recognise their responsibilities under the latest version of ISO14001 and provide resources to effectively manage the system.

We are committed to protecting the environment, preventing pollution, managing waste and sustainable development. We achieve an economic balance between environmental management and business activities.

Our key environmental principles are to:

- Fulfil our compliance obligations (legal, regulatory and those required by other interested parties) as a minimum standard of performance
- Regularly review this policy and associated objectives and targets to aid continual improvement and enhance environmental performance
- Liaise with our clients and suppliers on potential environmental issues and work with them to address concerns
- Proactively identify and assess environmental risks
- Drive out waste and maximise cost efficiencies

To support this policy measurable objectives are set, communicated and monitored throughout the organisation

The policy is reviewed annually by top management

Kevin Osgood
Group Quality Manager
