

E C Electronics Group Quality Policy Statement

The EC Electronics Group is dedicated to providing the highest quality products and services that consistently meet or exceed the requirements of our customers, statutory bodies, and regulatory authorities. We operate an integrated Quality Management System (QMS) engineered to satisfy the rigorous criteria of **ISO 9001:2015**, **AS9100D** and **BS EN ISO/IEC 80079-34:2020**.

Core Pillars of Our Quality Strategy

To achieve our strategic direction and support our operational goals, top management enforces the following mandates across all levels of the organisation:

- **Total Product Safety & Reliability:** We integrate operational risk management and strict configuration control throughout the product realisation process to safeguard end-users, critical flight systems, and personnel operating in hazardous, explosive environments.
- **Ex Certificate Integrity:** We guarantee that all products intended for use in potentially explosive atmospheres (Ex Products) are manufactured, inspected, and routinely tested in strict alignment with their design type-examination certificates.
- **Supply Chain Integrity & Counterfeit Prevention:** We manage external providers robustly. We actively mitigate the risks of introducing unapproved or counterfeit parts into our manufacturing streams.
- **Full Traceability:** We maintain an unbreakable chain of traceability from raw material procurement through production to final release and distribution.
- **Continual Improvement & Data-Driven Choices:** We evaluate our QMS performance regularly through internal audits and management reviews. We use this data to drive ongoing improvements in our processes and process maturity.
- **Competence, Awareness, and Ethics:** We foster a culture where every employee is appropriately trained, competent, and fully aware of their direct contribution to product safety, conformity, and ethical behaviour.

Framework for Quality Objectives

This policy establishes the operational foundation for setting, monitoring, and reviewing our annual measurable Quality Objectives. These objectives focus heavily on product conformity, on-time delivery, supplier performance metrics, and the absolute elimination of safety-critical defects.

Communication and Maintenance

Top management takes direct accountability for ensuring this policy is communicated, understood, and applied by all personnel within the organisation. It is made available to relevant interested parties, including regulatory bodies, notified bodies, and aerospace authorities, upon request. This statement is reviewed annually during management reviews to ensure its continued suitability to our business context and strategic direction.
